What Are Isotopes?

Before delving into the specifics of the lab answer key, it's essential to understand the foundational concept of isotopes. Isotopes are variants of a particular chemical element that share the same number of protons but differ in the number of neutrons within their nuclei. This variation results in differences in atomic mass and certain physical properties, although chemical behaviors remain largely similar.

For example, carbon has several isotopes, including:

- Carbon-12 (^{12}C): 6 protons and 6 neutrons
- Carbon-13 (^{13}C): 6 protons and 7 neutrons
- Carbon-14 (^{14}C): 6 protons and 8 neutrons (radioactive)
